

463 PIECE

The specifications below are in addition to those given at the beginning of this block under 4-- STRUCTURE OF LINKING ENTRY FIELDS.

Field Definition

This field is used to identify hierarchical links to items at the piece level. The record to which the link is made is at the piece level, and the record containing this field is at the piece-analytic, subset, or set level.

Notes on Field Contents

This field is used only when the record structure emphasizes hierarchical linking between data from various levels and when it is intended to identify, describe or indicate a resource at the piece level.

A piece is a single physically separate bibliographic item.

Field 463 should generally be used in a record for a piece-analytic to link upward to the piece that contains the piece-analytic. A set (at the highest hierarchical level) may contain a downward link to a piece using a 463 field.
